

Airpad Film

FROMM Cushion Film is an extremely versatile and durable packing product made with the same film process as Void Film air pillows. Each perforated section of FROMM Cushion Film is divided into air chambers making it flexible enough to wrap, bend and fold the film around products for multiple uses and optimum protection.

FROMM Void Film is a reliable cushioning material for light to medium weight objects. This serves as a fast and neat void-fill, a durable block and brace product.

Airpad cushions are lightweight which lower shipping costs, and because you're creating the inflated packing materials on-demand they require minimal storage space and handling in your facility.

FROMM films combine reliable protection and multiple uses with cost-saving features for the ideal in-the-box packaging products.

Note: This product is unfilled film. You need to purchase one of the Airpad Machines to inflate the film.

★ Features

- Environmentally Friendly
- Produced on demand - no storage required
- Safe, Clean and Convenient
- Lightweight, no OH&S issues
- Easy tear perforations make it easy to use

+ Benefits

- Optimal product protection
- Anti-static
