

Texpen

Exclusive to FROMM Packaging Australia, the Texpen paint marker is designed to write sharp, defined, bright marks on any surface including steel, plastic, concrete, rubber and more.

The specially formulated paint of the Texpen will mark any non-porous surface without losing legibility or brightness - even in extreme conditions.

Texpen is ergonomically designed to enable the user to mark at all angles – even upside down. The paint flow is controlled by the pressure bulb at the end of the barrel. The tough aluminium body of the Texpen will guarantee that it keeps its shape, even in harsh industrial environments.

★ Features

- Ergonomically designed
- Can write upside down
- Heavy duty design for industrial use
- The colour range is ideal for stock taking of steel
- High temperature formula available
